

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A communication terminal device comprising:
document input means for obtaining an image comprising a plurality of pages to be transmitted;

image storage means for storing at least a first page of the image obtained by the document input means;

communication control means capable of communicating with a recipient over a communication line or network; and

control means for causing the communication control means to automatically initiate dialing to the recipient when the first page of the plurality of pages of the image has been obtained from the document input means and stored in the image storage means,

wherein the control means indicates an incompletely stored page number to a user when, after the communication control means has dialed the recipient, an amount of space available in the image storage means falls within a predetermined value, and

wherein information indicating that the transmission is to be continued in a further communication is included in the transmission image.

2. (Canceled).

3. (Currently amended) A ~~The~~ communication terminal device ~~of claim 1~~ comprising:

document input means for obtaining an image comprising a plurality of pages to be transmitted;

image storage means for storing at least a first page of the image obtained by the document input means;

communication control means capable of communicating with a recipient over a communication line or network; and

control means for causing the communication control means to automatically initiate dialing to the recipient when the first page of the plurality of pages of the image has been obtained from the document input means and stored in the image storage means,

wherein the control means indicates an incompletely stored page number to a user when, after the communication control means has dialed the recipient, the image storage means becomes full, and

wherein information indicating that the transmission is to be continued in a further communication is included in the transmission image.

4. (Original) The communication terminal device of claim 1 further including monitoring means for enabling a user to monitor the communication line or network, and wherein the control means activates the monitoring means when the communication control means initiates dialing.

5. (Canceled)

6. (Original) The communication terminal device of claim 3 further comprising monitoring means for enabling a user to monitor the communication line or network, and wherein the control means activates the monitoring means when the communication control means initiates dialing.

7-8. (Canceled)

9. (Original) The communication terminal device of claim 1 wherein if one page of an image cannot be stored, the device informs the user of this fact.

10. (Original) The communication terminal device of claim 9 wherein when the device informs the user, the device suggests an alternative transmission method.

11. (Previously presented) The communication terminal device of claim 1 wherein scanning and transmission are performed simultaneously starting from the second page of the document.

12. (Currently amended) A communication method comprising the steps of:

A) obtaining an image from a document comprising a plurality of pages;

B) storing at least a first page of the image obtained in step (A) in a memory;

and

C) automatically dialing to a recipient after the first page of the image is stored in step (B) for sending the image to the recipient over a communication line or network; and

D) including information indicating that transmission is to be continued in a further communication in the transmission image if obtaining the image in step (A) is interrupted.

13. (Original) The communication method of claim 12 further including the step of indicating an incompletely stored page number when an amount of space available in the memory becomes less than a predetermined value.

14. (Original) The communication method of claim 12 further including the step of monitoring the communication line or network.

15-16. (Canceled)

17. (Original) The communication method of claim 12 further including the step of suggesting an alternative transmission method when an amount of space available in the memory becomes less than a predetermined value.

18. (Original) The communication method of claim 13 further including the step of suggesting an alternative transmission method when an amount of space available in the memory becomes less than a predetermined value.

19. (Original) The communication method of claim 12 wherein scanning and transmission are performed simultaneously starting from a second page of the document.

20. (Original) The communication method of claim 13 wherein scanning and transmission are performed simultaneously starting from a second page of the document.
